I enjoy analyzing data to gain insight and support decision-making. I also have a strong desire to understand cause and effect. I have taught myself many skills and enjoy learning something new everyday!

Born in a poor farming village in northern China, I was familiar with poverty, diseases and domestic violence. Fortunately, at an early age, I realized that education would be my only way out. So I worked hard and excelled in all subjects. I taught myself English and became an English Teacher and Senior Interpreter, which gave me the opportunities to work with people from different countries, cultures and occupations.

After I came to America, I started to teach myself math and majored in math and physics since I enjoy solving problems with logic and equations. I passed the Qualifying Examination at the Ph.D. level, which is a must to continue in the Ph.D. program. In order to pass this examination, a student must have the comprehensive grasp of physics needed for the successful conduct of research. Most graduate students agree that the Qualifying Examination is one of the most difficult tasks in graduate school because they must learn how to use several fundamental tools of physics together and choose the most appropriate tool for solving any problem. I strongly believe that we need not only patience to wait for opportunities, but also vision and diligence to create opportunities.
